

ANTONELLO FOGGETTI

AI & DATA SCIENCE SPECIALIST

PROFILE

My passion for technology stems from a drive to understand what lies behind the data and turn it into practical solutions. This mindset guides my daily pursuits. In gaming, I focus on complex data processing and telemetry, extracting information from APIs and leveraging vector embeddings to map player preferences and gameplay patterns. In sports—particularly football and tennis—my ambition is to work as a match analyst or scout: through a dedicated project in this domain, I applied quantitative analysis and clustering techniques to identify tactical trends, optimize on-field performance, and pinpoint player profiles tailored to team needs, both in training and scouting.

Whether behind a screen or on the sidelines, my goal remains the same: go beyond surface impressions and let the data make the difference.

LANGUAGES

Italian Native
English Intermediate (B2)

TECHNICAL SKILLS

AI & MACHINE LEARNING

PyTorch TensorFlow Scikit-Learn

GENERATIVE AI & LLM SYSTEMS

LangChain LangGraph ChromaDB

RAG Pipelines Ollama

COMPUTER VISION & NLP

YOLO ResNet BERT / mBERT

Object Detection

GEOSPATIAL & ANALYTICS

GeoPandas QGIS Raster / GeoJSON

Matplotlib Seaborn / Plotly

DEVELOPMENT & DEPLOYMENT

Python C# (Unity) FastAPI

Docker Compose SQL

Professional Experience

Data Scientist

02/2026 – 06/2026

Exprivia | Molfetta, Italy

- Engineered NLP models (BERT) for text classification and Computer Vision architectures (ResNet, YOLO) for image classification and real-time object detection.
- Conducted Generative AI experimentation designing robust RAG (Retrieval-Augmented Generation) pipelines powered by LangChain and ChromaDB vector store.
- Processed, analyzed, and transformed raster and vector geospatial data (GeoJSON); integrated QGIS for spatial data management and interactive visualization.

Unity VR Developer

02/2024 – 03/2024

Aton Informatica | Rome (Remote), Italy

- Developed the "Escape Elevator" VR simulator in C# on the Unity engine.
- Designed gameplay mechanics and implemented anti-motion sickness locomotion systems (teleportation, snap turn) using XR Interaction Toolkit and OpenXR.
- Fine-tuned collision physics and ergonomics to ensure an intuitive and accessible user experience for non-expert users.

Education & Training

Diploma in Data Science and AI Specialist

11/2024 – 09/2026

ITS Apulia Digital | Bari, Italy

Grade: 110 / 110

- Two-year intensive specialization covering Machine Learning, Deep Learning, Generative AI, Big Data architectures, MLOps, and Geospatial Intelligence.

Game Developer with C# & Unity

11/2023 – 12/2023

Archimede spa | Bari, Italy

- Professional intensive training in C# object-oriented programming, game physics, and real-time interactive 3D application architecture.

High School Diploma in Electrical Engineering

Graduated: 07/2008

ITIS Modesto Panetti | Bari, Italy

Grade: 64 / 100

Featured Projects

Sentiment BnB

[GitHub](#) • [Presentation](#)

Scalable hospitality analytics platform featuring a proprietary 5-tier NLP sentiment analysis pipeline (fine-tuned mBERT with data augmentation), interactive geospatial WebGIS (React/Leaflet), territorial policy RAG engine (ChromaDB), and autonomous agents (LangGraph with LLaMA 3) for real-time guest complaint resolution. Served via asynchronous FastAPI and orchestrated with Docker Compose.

Tech Stack: Python, mBERT, LangGraph, LLaMA 3, ChromaDB, FastAPI, React, Leaflet, Docker

Steam Rec

[GitHub](#)

Intelligent game recommendation system driven by natural language search and RAG architecture. Integrates local LLaMA 3 inference via Ollama, semantic embeddings with Sentence-Transformers, ChromaDB vector store, and live catalog data retrieval via SteamSpy API with an interactive CLI interface.

Tech Stack: Python, LLaMA 3 (Ollama), Sentence-Transformers, ChromaDB, SteamSpy API, CLI
